

Cittadella, 17.03.15

**SUBJECT: Status of Sirmax thermoplastic compounds referenced to
Kärcher standard KÄN 050.032- September 2014**

With reference to our product

ISOFIL – *all grades, excluding the flame retardants**

according to our actual knowledge and information, we declare that for its production the substances reported in Kärcher standard KÄN 050.032 - September 2014 and "supplementary requirements" are not used or intentionally added as components. For this reason, we suppose them not to be present, and no tests are performed for the detection of these substances.

We wish to clear that *phthalates* can be present in traces, typically below 15ppm as residues of the polypropylene catalytic system.

*Flame retardant grades: They are recognizable by the presence of one of the following characters: V0 or V1 or V2. They are formulated usually with antimony trioxide and bromine based flame retardant, with the exclusion of PBB and PBDE.
